

## Claims

1. A tooth model for dentistry training having a tooth crown portion formed as an imitation of the shape of a tooth, wherein at least the tooth crown portion is made of a tooth crown portion forming material having non-transparency or semi-transparency, a center-line average roughness  $R_a$  of the surface of the tooth crown portion is  $0.1\text{ }\mu\text{m}$  or more and less than  $10\text{ }\mu\text{m}$  and a light reflectance of the surface of the tooth crown portion is 70% or higher for light of 700 nm in wavelength.

2. The tooth model for dentistry training according to claim 1, wherein a color difference  $\Delta E^*_{ab}$  from a standard white color of the tooth crown portion forming material is 15 or less.
